

Husvik priority is the quality of the product and order execution according to customer preferences.

Husvik experience comprises knowledge about high quality on a daily base the company employs in house made quality control system of several levels. The system covers all the processes in designing, production and assembling of the buildings. You could benefit of our experience in designing and construction of quality and energy efficient housing.

Since 2011, Husvik production is awarded with SINTEF certification. SINTEF certification means that materials, solutions and processes employed by the producer are reliable, qualitative and environmentally safe. In order to prolong certification SINTEF authorities, do annual inspections of the factory to ascertain that both the final product and fabrication process correspond to expected quality standard. Employment of high and stable quality, raw materials is a mandatory precondition for high quality of our final product. Moreover, the final result of our team work must be exactly the one what customer has expected, to make him satisfied. The main criteria for our suppliers are stability of the quality, preciseness and reliability.
